

NC Violent Death Reporting System

VIOLENT DEATH IN NORTH CAROLINA: CUMBERLAND COUNTY INCIDENTS, 2015-2024

The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on violent deaths that occur in North Carolina, including: homicide, suicide, unintentional firearm deaths, legal intervention, and deaths of undetermined intent. NC-VDRS uses information from death certificates, medical examiner reports, and law enforcement reports to understand and aid in the prevention of violent deaths. Data reported in this document are based on the county where the death occurred rather than county of residence.¹ Visit the [NC-VDRS page](#) within the Injury and Violence Prevention Branch website for more information.

¹The occurrent ratio is used instead of the rate. This statistic is derived from the total number of violent deaths resulting from injuries in a specified geographic region divided by the number of residents in the region.

Manner of Death: Cumberland County, NC: NC-VDRS, 2015-2024*

- For the years 2015-2024, there were 1,077 violent deaths from injuries sustained in Cumberland County. Of these 1,077 deaths, 1,046 were NC residents (97.1%) and 960 were Cumberland County residents (89.1%).

- There were 564 suicides (52.4%), 463 homicides (43.0%), 12 unintentional firearm deaths (1.1%), 13 deaths from legal intervention (1.2%), and 25 deaths of undetermined intent (2.3%).

*Based on the county of injury occurrence.

- In Cumberland County, the suicide ratio was 3.4 times higher in males than females, and the homicide ratio was 3.9 times higher in males than in females.

Manner of Death by Sex: Cumberland County, NC: NC-VDRS, 2015-2024*

Manner of Death by Race/Ethnicity: Cumberland County, NC: NC-VDRS, 2015-2024*

- The suicide rate was highest among non-Hispanic (NH) American Indian victims (30.7 suicides per 100,000 population) followed by NH White victims (28.4 per 100,000).

- In contrast, the homicide rate was highest among NH Black victims (26.0 per 100,000 population) followed by NH American Indian victims (24.4 per 100,000).

- Suicides and homicides displayed dissimilar age patterns. Homicide rates peaked among those aged 25-34 with 25.1 homicides per 100,000, while suicide rates peaked among those aged 85 and older with 33.5 suicides per 100,000.
- More than 4 in 5 homicides (81.4%) and more than half of suicides (61.7%) involved firearms.
- Suspicion of intoxication was reported in 11.4% of homicides and 20.0% of suicides.
- For homicide incidents where one or more suspects were identified, the relationship of the victim to the suspect was known (current or former spouse/boyfriend/girlfriend, family, friend or acquaintance) more frequently for female (72.3%) than for male (43.1%) victims.

Circumstances of Suicides: Cumberland County, NC: NC-VDRS, 2015-2024*

*Based on the county of injury occurrence, 92.9% of cases had circumstance information. Nine females and 31 males were missing circumstance information.

- Twenty-seven percent (27.0%) of male and 26.7% of female Cumberland County suicide victims with circumstance information were characterized as being currently depressed when they died by suicide.

- Seventy percent (70.0%) of female and 44.1% of male suicide victims were characterized as having a current mental health problem.

- Females (31.7%) were more likely to have attempted suicide in the past as compared to males (12.1%).

Circumstances of Homicides: Cumberland County, NC: NC-VDRS, 2015-2024*

*Based on the county of injury occurrence, 95.9% of cases had circumstance information. Zero females and 19 males were missing circumstance information.

- Arguments or conflicts were more likely to be a contributing factor for male homicides (42.9%) than for female homicides (38.3%).

- Twenty percent (20.2%) of female homicides and 34.3% of male homicides were precipitated by another crime such as robbery, burglary, or drug trafficking.

- Intimate partner violence was a contributing factor in 46.8% of female homicides, but only 10.6% of male homicides.
