

NC Violent Death Reporting System

VIOLENT DEATH IN NORTH CAROLINA: IREDELL COUNTY INCIDENTS, 2014-2023

The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on violent deaths that occur in North Carolina, including: homicide, suicide, unintentional firearm deaths, legal intervention, and deaths of undetermined intent. NC-VDRS uses information from death certificates, medical examiner reports, and law enforcement reports to understand and aid in the prevention of violent deaths. Data reported in this document are based on the county where the death occurred rather than county of residence.¹ For more information, please visit <https://injuryfreenc.dph.ncdhhs.gov/About/ncVDRS.htm>.

¹The occurrent ratio is used instead of the rate. This statistic is derived from the total number of violent deaths resulting from injuries in a specified geographic region divided by the number of residents in the region.

**Manner of Death: Iredell County, NC:
NC-VDRS, 2014-2023***

- For the years 2014-2023, there were 381 violent deaths from injuries sustained in Iredell County. Of these 381 deaths, 377 were NC residents (99.0%) and 339 were Iredell County residents (89.0%).

- There were 296 suicides (77.7%), 65 homicides (17.1%), five unintentional firearm deaths (1.3%), seven deaths from legal intervention (1.8%), and eight deaths of undetermined intent (2.1%).

*Based on the county of injury occurrence.

- In Iredell County, the suicide ratio was 4.2 times higher in males than in females, and the homicide ratio was 3.5 times higher in males than in females.

**Manner of Death by Sex: Iredell County, NC:
NC-VDRS, 2014-2023***

*Rate per 100,000 based on the county of injury occurrence.

**Manner of Death by Race/Ethnicity: Iredell County, NC:
NC-VDRS, 2014-2023***

*Rate per 100,000 based on the county of injury occurrence. † Rate suppressed, 1-4 deaths. Chart excludes one death of unknown or other race/ethnicity.

- The suicide rate was highest among non-Hispanic (NH) White victims (21.1 suicides per 100,000 population) followed by Hispanic victims (12.5 per 100,000).

- In contrast, the homicide rate was highest among NH Black victims (13.5 per 100,000 population) followed by NH White victims (2.3 per 100,000).

- Suicides and homicides displayed dissimilar age patterns. Homicide rates peaked among those aged 20-24 with 8.5 homicides per 100,000, while suicide rates peaked among those aged 85 and older with 44.1 suicides per 100,000.
- Nearly three quarters of homicides (72.3%) and two-thirds of suicides (66.9%) involved firearms.
- Suspicion of intoxication was reported in 10.8% of homicides and 19.3% of suicides.
- For homicide incidents where one or more suspects were identified, the relationship of the victim to the suspect was known (current or former spouse/boyfriend/girlfriend, family, friend or acquaintance) more frequently for female (80.0%) than male (68.0%) victims.

**Circumstances of Suicides: Iredell County, NC:
NC-VDRS, 2014-2023***

*Based on the county of injury occurrence, 99.0% of cases had circumstance information. Zero females and three males were missing circumstance information.

- Thirty-three percent (33.3%) of male and 22.0% of female Iredell County suicide victims with circumstance information were characterized as being currently depressed when they died by suicide.
- Fifty-eight percent (57.6%) of female and 52.6% of male suicide victims were characterized as having a current mental health problem.
- Females (13.6%) were more likely to have attempted suicide in the past as compared to males (11.5%).

**Circumstances of Homicides: Iredell County, NC:
NC-VDRS, 2014-2023***

*Based on the county of injury occurrence, 93.8% of cases had circumstance information. Zero females and four males were missing circumstance information.

† There were fewer than 5 deaths

- Arguments or conflicts were more likely to be a contributing factor for female homicides (53.3%) than for male homicides (50.0%).
- Twenty percent (20.0%) of female homicides and 21.7% of male homicides were precipitated by another crime such as robbery, burglary, or drug trafficking.
- Intimate partner violence was a contributing factor in 46.7% of female homicides, but only 17.4% of male homicides.

The North Carolina Violent Death Reporting System is supported by Cooperative Agreement 5NU17/CE924955-02-00 with the Centers for Disease Control and Prevention (CDC).
