

North Carolina Statewide Weekly Heat-related Illness Surveillance Report July 20-26, 2025

Statewide Key Messages

The average weekly rate of heat-related illness (HRI) emergency department (ED) visits this season to date is 3.2 per 100,000 population.

This week (July 20-26, 2025):

- There were 538 HRI ED visits (0.6% of total ED visits), with a rate of 5.1 per 100,000 population
- The rate was highest among males aged 65+ years (11.0 per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in the Sandhills (7.0 per 100,000 population). (Figure 2; Region 7)
- The most frequent heat related diagnosis code was **heat** exhaustion (n = 192; 57%) (Table 1)
- The maximum daily heat index ranged from 90 to 104.7°F at Raleigh-Durham International Airport (Figure 3)
- There were 6 days when the minimum temperature was above 70°F

Figure 1. Rate of Heat-Related Illness Emergency Department Visits by Sex and Age

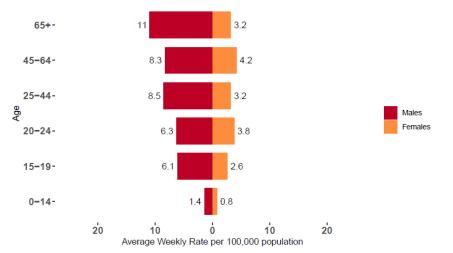

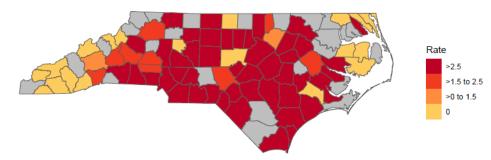

Figure 2. Rate of Heat-related Illness Emergency Department Visits per 100,000 Population

Rates based on counts between 1-4 are suppressed for counties with less than 500 total ED visits, as shown in gray.

Table 1. Heat-related illness ED visits by Severity

Table 1: Heat-related lilless ED visits by Severity		
Severity [§]	Number (N = 337 [‡])	Percent [†]
Heat Stroke	7	2.1
Heat Exhaustion	192	57
Heat Syncope	24	7.1
Heat Cramps	8	2.4
Other Effects	106	31.5

§ Definitions of heat-related illness severity categories:

- **‡** Missing severity data = 201
- † May not total 100 due to rounding
- $\|$ other effects include heat fatigue, heat edema, other effects of heat and light, and other effects unspecified

*The 538 total HRI ED visits includes 36 visits that were missing county of residence. These 36 visits are excluded from the regional reports.

North Carolina Statewide Weekly Heat-related Illness Surveillance Report July 20-26, 2025

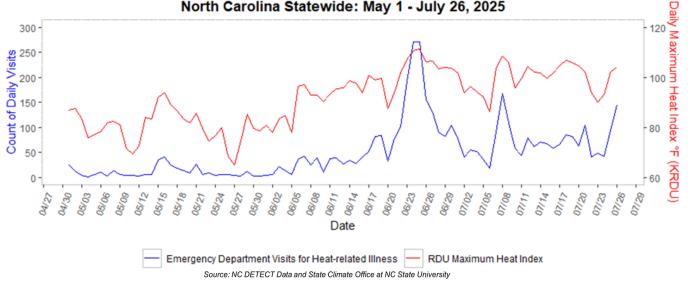

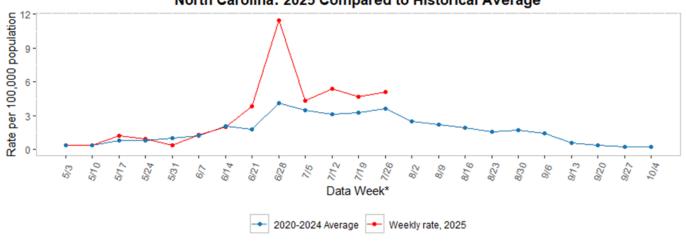

Figure 4. Rate of Emergency Department Visits for Heat-related Illness North Carolina: 2025 Compared to Historical Average

Southeast NC (Region 1) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 3.9 per 100,000 population.

This week (July 20-26, 2025):

- There were 50 HRI ED visits (0.6% of total ED visits), with a rate of 5.6 per 100,000 population
- The rate was highest among males aged 45-64 years (12.7 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Craven County (7.9 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 17; 65.4%) (Table 1)
- The maximum daily heat index ranged from **96.5 to 111.6°F** at Wilmington International Airport (Figure 3)
- There were 7 days when the minimum temperature was above 70°F

North Carolina Weekly Heat-related Illness Surveillance Report: North Central NC (Region 2)

July 20-26, 2025

North Central NC (Region 2) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 2.6 per 100,000 population.

This week (July 20-26, 2025):

- There were 89 HRI ED visits (0.5% of total ED visits), with a rate of 4.1 per 100,000 population
- The rate was highest among males aged 65+ years (10.6 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Randolph County (9.0 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 29; 50.9%) (Table 1)
- The maximum daily heat index ranged from 86.6 to 101.3°F at Piedmont Triad International Airport (Figure 3)
- There were 6 days when the minimum temperature was above 70°F

North Carolina Weekly Heat-related Illness Surveillance Report: Northeast (Region 3) July 20-26, 2025

Northeastern NC (Region 3) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 4.3 per 100,000 population

This week (July 20-26, 2025):

- There were **13** HRI ED visits (0.6% of total ED visits), with a rate of **6.6 per 100,000 population**
- The rate was highest among females aged 45-64 years (18.0 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Pasquotank County (14.7 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 5; 50%) (Table 1)
- The maximum daily heat index ranged from 93.4 to 115.4°F at Pitt-Greenville Airport (Figure 3)
- There were 4 days when the minimum temperature was above 70°F

North Carolina Weekly Heat-related Illness Surveillance Report: South Central NC (Region 4) July 20-26, 2025

South Central NC (Region 4) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 2.7 per 100,000 population

This week (July 20-26, 2025):

- There were **117** HRI ED visits (0.5% of total ED visits), with a rate of **4.5 per 100,000 population**
- The rate was highest among males aged 65+ years (13.0 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Cleveland County (9.0 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 37; 50%) (Table 1)
- The maximum heat daily index ranged from 89.4 to 113.7°F at Charlotte/Douglas International Airport (Figure 3)
- There were **7** days when the minimum temperature was above 70°F

North Coastal Plain Area (Region 5) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 3.1 per 100,000 population.

This week (July 20-26, 2025):

- There were 111 HRI ED visits (0.6% of total ED visits), with a rate of 5.1 per 100,000 population
- The rate was highest among males aged 65+ years (11.2 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Wilson County (12.7 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 41; 56.2%) (Table 1)
- The maximum daily heat index ranged from 92.1 to 106.2°F at Rocky Mount-Wilson Regional Airport (Figure 3)
- There were 4 days when the minimum temperature was above 70°F

Foothills Area (Region 6) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 4.2 per 100,000 population.

This week (July 20-26, 2025):

- There were 17 HRI ED visits (0.4% of total ED visits), with a rate of
 3.6 per 100,000 population
- The rate was highest among males aged 45-64 years (9 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Rutherford County (9.3 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 8; 80%) (Table 1)
- The maximum daily heat index ranged from 88.7 to 103.4°F at Morganton-Lenoir Airport (Figure 3)
- There were **4** days when the minimum temperature was above 70°F.

North Carolina Weekly Heat-related Illness Surveillance Report: Mountains (Region 8) July 20-26, 2025

Mountain Area (Region 8) Key Messages

The average weekly rate of heat-related illness emergency department visits this season to date is 1.1 per 100,000 population.

This week (July 20-26, 2025):

- There were 15 HRI ED visits (0.2% of total ED visits), with a rate of 1.9 per 100,000 population
- The rate was highest among males aged 25-44 years (4.3 HRI ED visits per 100,000 population) (Figure 1)
- The rate of HRI ED visits was highest in Henderson County (1.7 per 100,000 population) (Figure 2)
- The most frequent heat related diagnosis code was heat exhaustion (n = 7; 77.8%) (Table 1)
- The maximum daily heat index ranged from **84.8 to 93.8°F** at Asheville Regional Airport (Figure 3)
- There were 2 days when the minimum temperature was above 70°F

North Carolina HRI Surveillance Regions

(updated for 2025 to match the new Heat Health Alert System regions)

About the data

The heat-related illness data in the report is from NC DETECT. NC DETECT is a statewide public health syndromic surveillance system, funded by the NC Division of Public Health (NC DPH) Federal Public Health Emergency Preparedness Grant and managed through collaboration between NC DPH and the UNC-CH Department of Emergency Medicine's Carolina Center for Health Informatics. The NC DETECT Data Oversight Committee is not responsible for the scientific validity or accuracy of methodology, results, statistical analyses, or conclusions presented.

Climate data

The maximum heat index and minimum temperature data in this report are from the North Carolina State Climate Office. The Raleigh-Durham International Airport weather station (RDU) was selected to represent the climate data for the statewide report. One weather station from each region was selected to represent the climate data for each region. The weather station locations and their corresponding regions are as follows:

Wilmington International Airport (ILM) – Southeast (Region 1), Piedmont Triad Airport (GSO) – North Central (Region 2), Pitt-Greenville Airport (PGV) – Northeast (Region 3), Charlotte/Douglas International Airport (CLT) – South Central (Region 4),

Rocky Mount-Wilson Regional Airport (RWI) – North Coastal Plain (Region 5), Morganton-Lenoir Airport (MRN) – Foothills (Region 6), Fayetteville Regional/Grannis Field Airport (FAY) – Sandhills (Region 7), Asheville Regional Airport (AVL) – Mountains (Region 8). During 6/19, climate data was obtained from the NC School of Science and Math - Morganton (MORG) EcoNet weather station (Foothills, Region 6).

The NCDHHS Climate and Health Program is supported by the Centers for Disease Control and Prevention of the U.S. Department of Health and Human Services (HHS) as part of a financial assistance award totaling \$500,000 annually with 100 percent funded by CDC/HHS. The contents are those of the author(s) and do not necessarily represent the official views of, nor an endorsement, by CDC/HHS, or the U.S. Government. Award No. (Award No. 6NUE1EH001449-03-02).
